Introduction

Project Introduction

Project Zebrocoin aims to bring liquidity in crypto market and also introduces unique decentralized financing system with 100% transparency.

Our goal is to circulate more liquidity in crypto markets via Zebrocoin.

Use of Zebrocoin in reality at <https://zebrocart.com> is to make it's value in real world as well as value in crypto markets.

Project Zebrocoin also aims to share highest possible profit to yield farmers for staking their ZEBRO tokens with us.

Project Zebrocoin is started with keeping investors in center of our mind.

We primarily focus on circulation of liquidity into crypto markets rather than focusing on profiting only, our core believe is to earn and let others earn .

Token Introduction

Zebrocoin is multi-chain smart contract token on 5 networks with supply limit capped by 10 Billion tokens.

Zebrocoin is main token of Project Zebrocoin for key use in discount program at e-commerce website <https://zebrocart.com>.

Zebrocoin is also DeFi (Decentralized Financing) for staking, yield farming on it's official website <https://zebrocoin.info>.

Zebrocoin maximum supply limit is capped by 10 000 000 000 000 (Ten Billion) ZEBRO.

As a utility token ZEBRO can be send peer2peer with low transaction fee on BSC chain.

Zebrocoin gives complete anonymity and transparency to it's users and it is created on completely decentralized BSC chain.

Specifications

Token Specifications

Token Name: Zebrocoin

Token Abbreviation: ZEBRO

Token Type: Multi-Chain Token (On BSC, Polygon, Fantom, Phoenix, EtherGem Network)

Token Supply: 10000000000 (Ten Billion) ZEBRO

Decimals: 18

Contract Address: 0x89c4434119b237922069673439c35f90025563c9

Contract Creator: 0x45Cf35822345779b1b799795Ee4B32020a3cF0Bb

Chain Specification

Zebrocoin contract deployed on 5 chains BSC, Polygon, Fantom, Phoenix and EtherGem network.

Zebrocoin ZEBRO is created first on Binance Smart Chain BSC chain on 01 Sep 2021.

Later Zebrocoin contract deployed on Polygon, Fantom, Phoenix and EtherGem chain

Total supply after burn of tokens on each chain is 10 Billion tokens and it will remain 10 Billion tokens or less forever.

Zebrocoin BSC BEP20 <https://bscscan.com/token/0x89c4434119b237922069673439c35f90025563c9>
ZEBRO BSC Circulating Supply After Burn: 3.5 billion Tokens

Zebrocoin Polygon <https://polygonscan.com/token/0x89c4434119b237922069673439c35f90025563c9>
ZEBRO MATIC20 Circulating Supply After Burn: 2.5 Billion Tokens

Zebrocoin Fantom <https://ftmscan.com/token/0x89c4434119b237922069673439c35f90025563c9>
ZEBRO Fantom Circulating Supply After Burn: 2 Billion Tokens

Zebrocoin Phoenix <https://phoenixplorer.com/token/0x89C4434119b237922069673439C35F90025563C9>
ZEBRO Phoenix Circulating Supply After Burn: 1 Billion Tokens

Zebrocoin EtherGem <https://blockscout.egem.io/tokens/0x89C4434119b237922069673439C35F90025563C9>
ZEBRO EtherGem Circulating Supply After Burn: 1 Billion Tokens

Staking/Farming

Staking

Users can stake their tokens for staking to get rewarded by developer for staking of tokens at it's official staking platform <https://zebrocoin.info>.

Staking reward could be distributed by developers daily/weekly/monthly at fixed rate of interest per annum.

Benefit of staking is that holder can earn extra fixed income on holdings of ZEBRO.

Staking of tokens are locked periodically as per investors choice, it could be for a month or three months or a year. Locked tokens can only be redeemed after specific period it is locked for, while reward tokens may be redeemed anytime after receiving.

Yield Farming

Yield farming is staking of tokens at it's official platform for profiting from holding of your tokens at platform for harvesting profit anytime.

Your tokens in yield farming are not locked like in staking, you may exit anytime you want to and take back all or partly amount of your tokens and profit from yield farm.

Yield farming is a great option to profit from your holdings and redeem your liquidity anytime you want to with profit.

There is no periodic lock on invested tokens in Yield farming.

In yield farming there is no fixed income/interest rates.

Holders may also stake for yield farming ZEBRO by providing liquidity to swap platforms such as PancakeSwap UniSwap etc. and harvest profit APR, farmers can remove liquidity anytime.

Roadmap

Phase I

Q3 2021: Creating of Concept, Whitepaper, Website, Token Sale Etc.

Project concept, whitepaper, token sale and other primary development of the project will be done in Phase I. Including exchange listings for trade of Zebrocoin.

Phase II

Q1 2022: Exchange Listing, Staking, Yield Farming

Exchange listings, staking and yield farming will be started from Phase II.

Phase III

Q2 2022: Core Development

Core development of the project such as mobile apps, swap platform etc. will be developed in Phase III.

Phase IV

Q3 2022: Main Development

Main development of the project such as upgraded webapp, upgraded mobile apps etc. is scheduled in Phase IV.

Phase V

Q4 2022: Usecase Of Token

Usecase of token, merchant payment integration to accept Zebrocoin as payment etc. will be developed in Phase V.

Phase VI

Q1 2023: More Developments

More development of project such as token chain upgrade etc. in Phase VI.
